Student | Aspiring Web Developer

Portfolio: ranapreet527-spec.github.io/PreetRana-PortfolioWebsite

GitHub: github.com/ranapreet527-spec

Email: ranapreet527@gmail.com

Profile

Web development student building practical projects with HTML, CSS, JavaScript, Python and MySQL. I am interested in responsive interfaces and database-driven web applications, and I improve my skills through hands-on work: building pages, connecting them to databases, and debugging them until they behave correctly.

My projects range from a campus food-ordering front end to a gaming-station booking system with a Flask and MySQL back end, and a personal portfolio published on GitHub Pages.

Career Objective

To secure an internship or entry-level role in web development where I can apply my HTML, CSS, JavaScript, Python and MySQL skills, learn from experienced developers, and contribute to building clean, responsive and reliable web applications.

Education

B.Tech, Computer Science and Engineering (CSE) — AMTICS College, Uka Tarsadia University (UTU)

Current semester: 3rd Sem

Relevant coursework:

- Web Development
- Database Management Systems
- Java Programming
- Software Engineering
- Programming Fundamentals

Technical Skills

Area	Skills
Frontend	HTML5, CSS3, JavaScript, responsive web design
Backend & Database	Python, Flask, PHP, MySQL
Programming	Java, C (academic coursework)
Tools	Git, GitHub, Visual Studio Code

Skills in Practice

- **Responsive layouts:** page templates and interfaces built with HTML, CSS and JavaScript that adapt to different screen sizes.
- **Database-driven applications:** writing SQL queries and joins, designing relational schemas, and connecting applications to MySQL.
- **Server-side basics:** PHP form handling with CRUD operations, and Python fundamentals; Flask planned for the booking project.
- **Version control:** tracking work with Git and publishing projects through GitHub and GitHub Pages.
- **Debugging:** practised building and debugging web pages and database connections during academic practicals.

Projects

Gaming Zone Management System

Tech stack: HTML, CSS, JavaScript, Python/Flask, MySQL (planned stack)

Student web application for browsing games and gaming stations and supporting station bookings.

- Page templates for browsing games and stations.
- Database queries to read and store game, station and booking data in MySQL.
- Booking-flow development, from choosing a station to confirming a booking.
- GitHub: https://github.com/ranapreet527-spec/GGZONE-Gaming-Zone

SEM Bites — Campus Food Ordering

Tech stack: HTML, CSS, JavaScript

Frontend project concept for a campus food-ordering website.

- Menu browsing so students can see what is available.
- A cart indicator that shows the current number of items.
- A cart sidebar for reviewing the order.
- GitHub:https://github.com/ranapreet527-spec/SEM-Bites-Food-Ordering

My Portfolio Website

Tech stack: HTML, CSS, JavaScript, GitHub Pages

Responsive personal portfolio, published live using GitHub Pages.

- Layout built to work across desktop and mobile screens.
- Hosted from a public GitHub repository and published with GitHub Pages.
- Live site: ranapreet527-spec.github.io/PreetRana-PortfolioWebsite
- GitHub: https://github.com/ranapreet527-spec/PreetRana-PortfolioWebsite

Additional Academic Experience

Completed academic practicals and coursework covering:

- **Web technologies:** HTML, CSS and JavaScript pages, practised building and debugging.
- **PHP:** form handling and CRUD (create, read, update, delete) operations.
- **Python:** programming fundamentals.
- **Java:** file input/output.
- **Databases (DBMS):** SQL queries, joins and relational database design.
- **MySQL integration:** connecting applications to MySQL databases.
