Mini Project Report

Project: Personal Portfolio Website

Subject: IT4048 — Version Control with Git and GitHub

Student Name: Preet Rana

Enrollment Number: 202506101410014

1. Objective

To design and develop a responsive personal portfolio website that presents the student's introduction, skills, projects, and contact information, and to publish it using GitHub Pages.

2. Technologies Used

HTML5, CSS3, JavaScript, Git, GitHub, and GitHub Pages.

3. Project Description

The website contains Home, About, Skills, Projects, and Contact sections. It uses responsive layouts, a consistent dark theme, project cards, mobile navigation, and simple animations. The contact form prepares an email using the visitor's default email application.

4. Main Features

- Responsive design for desktop, tablet, and mobile.
- Navigation menu and profile introduction.
- Skills cards and sample project cards.
- Contact form with required-field validation.
- Scroll animations and hover effects.
- GitHub Pages deployment support.

5. How to Run

Open index.html in a modern browser. To publish, upload the project files to a public GitHub repository, then select Settings → Pages → Deploy from a branch → main → /(root).

6. Output and Screenshots

The output is a responsive personal portfolio website. Insert screenshots of the Home, Skills, Projects, and Contact sections here after testing the site.

7. Repository and Live Links

GitHub Repository: Add your repository URL after uploading.
Live Website: Add the URL generated by GitHub Pages.

8. Conclusion

This project demonstrates front-end web development and the use of GitHub for version control and GitHub Pages for publishing a static website.

Before submission: Update sample email/social links, replace example repository URLs, add your real résumé PDF, test the live website, and insert screenshots.
